

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning on page 8, line 4 as follows:

Each tool 5 comprises a base element 6 and an engaging element 7. The base element 6 is fixedly mounted in the tool holder 4 and the engaging element 7 is pivotally arranged relative to the base element 6. As can be seen in the figures, the base elements 6 of the tools 5 form a substantially continuous section enclosing the rotary tool holder. For closing of the tool 5, the engaging element 7 is thus pivoted downwards into abutment against the base element 6.
